- **Teamwork:** We believe everything is possible through teamwork.

CURTAIN WALL & STRUCTURAL GLAZING

Curtain Wall System is one of the elements of facade technology in high rise buildings which is a thin, usually aluminium-framed wall, containing in-fills of glass, metal panels, or thin stone.

Structural Glazing is one of the most cost-effective contemporary solution for Glass facade construction. Under this system glass is structurally glazed with the help of Silicone sealant to outside surface of the aluminium frame resulting in a flush external finish.

SPIDER GLAZING

Spider Glazing is the only option available for the larger opening exterior elevations and entrance, especially of commercial buildings. It is the technology where specially designed stainless steel fixings are used to absorb all the static and dynamic loads like weight of glass, wind loads etc. and distribute them to the support structure.

ACP WALL CLADDING

ACP Wall Cladding has the capacity and strength to protect the walls from extreme weather conditions. They have proven to offer high quality thermal relaxation offering added saving in energy costs. They act as a solid sound-barrier hence allowing the users to enjoy sound deduction from the outside. Choosing the right material is essential to avoid repeated expenses on repairing damages of colour, fasteners, silicone sealant etc.

UPVC /ALUMINIUM DOORS & WINDOWS

Doors and windows beautify and enhance the elegance of a building whether it is residential or commercial. Heavy duty profiles are available both in Aluminium and UPVC to build beautiful doors and windows which offer varied solutions in acoustic comfort, privacy and security.

CUSTOMIZED MODULAR KITCHEN

People invest a lot into kitchen upgrades because it is the heart of a family's day-to-day living. It is a bonding area that not only ties your home together, it ties your loved ones also. The main functions of a kitchen are to store, prepare and cook food and to complete related tasks such as dish-washing. It may also be used for dining or small meals such as breakfast, entertaining, laundry etc. Only a well designed, brilliantly constructed and scientifically arrayed kitchen can provide all these functions.

RESIDENTIAL & COMMERCIAL INTERIORS

Interior design provides a soul to a building or space and makes the area more functional pleasant and liveable. It exists as an idea first and is brought to reality through careful planning. The place where one feels the most comfortable and relaxed in his life is his bedroom. So home interiors deserve a great deal of attention in furnishings and its colour patterns.

The interiors of commercial spaces like offices, restaurants, retail stores etc. are also should be well designed to beautify and for maximum utilisation of the available space.

FRAME-LESS TOUGHENED GLASS

Glass partitions are widely used to divide the available large space into cabins of required and convenient sizes. Frame-less glass doors are appreciated for perfect finish, long functional life and easy maintenance. It include fixed panels and swing or sliding doors which are operated manually or automatically.

SHOWER ENCLOSURE

Frame-less Shower Partitions are made to separate the wet and dry area in bathrooms. 8/10mm thick toughened glasses and water resistant stainless steel accessories make the shower partitions rich in style and king in safety.

GLASS HANDRAILS AND BALUSTRADES

Besides protection, a well-fabricated and properly constructed Staircase or Balcony can be an amazing addition to any home or commercial infrastructure. Stainless Steel Framed or Frameless Glass Balustrades offer a versatile, cost effective solution and can be used in both commercial and residential areas.

OUR ASSOCIATES:
